InfoMorph Feature List

InfoMorph transforms a supplied source into channel-specific drafts, supports source-based factual review and helps identify content affected by revisions.

Status definitions

- “Present in prototype” means implementation exists; full deployed validation remains pending.
- “Integration requiring validation” means availability depends on external service support and live testing.
- “Planned” means future scope, not currently available.

---

1. Source input and understanding

Feature	Description	Status
Text input	Paste source information for transformation.	Present in prototype
Selectable-text PDF import	Extract readable PDF text. Maximum 10 MB and up to 50 pages.	Present in prototype
Web-page import	Extract text from a readable public page; some pages may require manual text entry.	Present in prototype
Source analysis	Produce a summary and structured facts such as deadlines, fees, eligibility and instructions.	Present in prototype
Source quotations	Display supporting quotations for extracted facts and indicate whether quotations match the source.	Present in prototype

---

2. Content creation and writing controls

Feature	Description	Status
Ten output formats	Instagram post, Instagram story, WhatsApp message, WhatsApp status, LinkedIn post, blog, short-form video script, YouTube caption, X post and email.	Present in prototype
Channel-specific drafting	Adapt structure and length to the selected format.	Present in prototype
Audience and tone controls	Tailor writing to the intended reader and communication style.	Present in prototype
Language selection	Instruct generation in the selected language; quality requires review and has not been benchmarked.	Present in prototype
Objective and hook controls	Adjust the communication goal and opening approach.	Present in prototype
Writing voice sample	Use an optional sample to guide writing style.	Present in prototype
Plain-text cleanup	Remove raw asterisks and sentence em/en dashes from generated copy while preserving meaningful ordinary hyphens.	Present in prototype

---

3. Evidence and revision review

Feature	Description	Status
Claim review	Compare generated factual claims against the supplied source.	Present in prototype
Evidence display	Show claim status and available source quotations.	Present in prototype
Supporting checks	Flag selected quotation, date and money mismatches.	Present in prototype
Review outcomes	Supported, Contradiction, Unsupported and Needs Review at claim level; overall verified, review or blocked labels.	Present in prototype
Draft editing and re-verification	Allow manual edits and a fresh verification request; editing clears previous verification.	Present in prototype
Source revision comparison	Compare an old source with a user-provided updated source and list detected factual changes.	Present in prototype
Affected draft flags	Identify drafts potentially affected by detected changes.	Present in prototype
Affected text regeneration	Request new drafts using revised information, then review them.	Present in prototype

Important note

Verification indicates consistency with supplied text, not independent truth. Review labels do not prevent every copy or download action. Human review remains necessary. Revisions are supplied by the user; continuous monitoring is planned.

4. Review, export and project management

Feature	Description	Status
Studio workspace	Review source information and switch between generated channel drafts.	Present in prototype
Copy and text download	Manually export reviewed copy for use in other tools.	Present in prototype
Typographic PNG export	Export a post graphic based on the generated headline; this is not AI image generation.	Present in prototype
User accounts and project saving	Sign in, save projects and reopen saved source information and generated content.	Present in prototype
Retry and feedback messages	Show progress and errors for relevant operations.	Present in prototype

5. Media capabilities

Feature	Description	Status
Audio briefing scripts	Generate and edit narration drafts based on source information.	Present in prototype, requires live evaluation check
Speech synthesis and WAV download	Produce playable narration where the configured service/model is supported.	Integration requiring validation
Video storyboards	Generate scene descriptions, voiceover text and timing; edit and export storyboard content.	Present in prototype, requires live evaluation check
Video clip requests	Request rendered clips where account and API capabilities support them.	Integration requiring validation

---

6. Planned additions

Feature	Description	Status
OCR for scanned PDFs	OCR support for scanned PDFs.	Planned
More robust factual checks and page-level citations	Expand factual review depth and citation detail.	Planned
Team review and approval workflows	Support collaborative review and approvals.	Planned
Authorized social publishing and scheduling	Support authorized publishing and scheduling to social channels.	Planned
Continuous source document monitoring	Monitor supplied source documents for changes over time.	Planned
Licensed trend signals and content analytics	Add licensed trend signals and content analytics.	Planned
Broader organizational integrations	Extend integrations for organizational workflows.	Planned

---

Final qualifications

Source input: 20 to 30,000 characters. Scanned PDFs require pasted text today. No automatic social publishing or live trend collection is claimed.

Feature descriptions reflect the prototype reviewed for the hackathon. Full build and deployed end-to-end validation remain pending. Media availability requires separate testing.

Current workflow

Supply source, generate drafts, review evidence, handle revisions and export.
